Written by renowned sociologist and evolutionary theorist Marion Blute, *Evolutionary Systems and Society* presents a new theoretical framework for understanding the evolution of society. Blute argues that society is not simply a product of biological evolution, but rather a complex system that has evolved through its own set of processes. These processes include natural selection, but also other mechanisms such as cultural transmission, social learning, and technological innovation.

Blute's theory of evolutionary systems provides a powerful new way of understanding the dynamics of social change. It can be used to explain a wide range of phenomena, from the rise of new social movements to the long-term evolution of human civilization. *Evolutionary Systems and Society* is a major contribution to the social sciences and will be essential reading for anyone interested in the evolution of society.
